

Yaseen Khatib

Senior MERN Stack & AI Systems Engineer / Solutions Architect

Senior developer with 4.5+ years of experience leveraging advanced AI orchestration to drive end-to-end engineering pipelines. Expert at slashing system latencies, payload sizes, and engineering bottlenecks at AI-speed.

HYDERABAD, INDIA

WORK EXPERIENCE

- Senior Software Developer

Sparity

06/2025 – Present

Hyderabad, India (Hybrid)

 - AI Framework Orchestration:** Engineering complex Agentic RAG models and sovereign system integrations inside enterprise MERN architecture.
 - Workflow Compilations:** Overseeing system transition paths to use highly optimized prompt logic and automated logic layers.
- Full Stack Developer

MSA Software

01/2023 – 05/2025

Remote

 - Accelerated system dashboard response speeds by **1.5x to 2x** implementing strict structural caching layers and lazy loading protocols.
 - Successfully migrated sprawling legacy JavaScript codebases into safe, strictly structured **TypeScript** pipelines.
 - Refactored shared context state parameters from Redux into clean **Redux Toolkit slice configurations**.
- Software Developer (SDE 1)

Manorama Infosolutions Pvt Ltd.

09/2021 – 01/2023

Remote

 - Engineered custom REST routing layers inside ASP.NET environments, delivering a confirmed **2x boost in wire payload processing throughput**.
 - Restructured system communication parameters cleanly into rigorous Model-View-Controller patterns.

TECHNICAL SKILLS

AI & ORCHESTRATION

Agentic RAG

Claude Core

LLM Prompts

FRONTEND MASTERY

React.js

TypeScript

Next.js App Router

Redux Toolkit

BACKEND & DATA

Node.js / Express

MongoDB

Redis Cache

SQL Server

EDUCATION

B.E (Computer Science) 2021
D. Y. Patil College of Eng.

Diploma (CS) 2018
D. Y. Patil Polytechnic

CERTIFICATIONS

- Front End Architecture — Coding Ninjas
- React Production Development — Coding Ninjas
- Advanced Backend Systems — Coding Ninjas

AI & FULL STACK PROJECTS

streamerOS Flagship Deployment

A Rust-powered desktop cockpit for streaming professionals, engineered via modular Claude orchestrations. Handles live system telemetry feeds, multi-platform chat velocity streams, and real-time automated OBS scene synchronization.

- AI-Architected
- Rust / Next.js
- Live Telemetry
- WebSockets
- Claude AI

Police Agentic RAG System (POSCO Matrix)

An autonomous agentic RAG engine for law-enforcement workflows. Scans massive multi-format legal archives with custom vector embeddings to trace, evaluate, and output secure, court-admissible verdict matrices.

- Agentic AI
- Vector Retrieval
- LLM Orchestration
- Python

IntegrateX Automation Core

A node-routing workflow-automation environment with responsive connectors, processing layers, and directional edge bindings. A custom state Serialization Adapter compresses graph definitions over the wire.

- 94% Payload Compression
- React Flow
- Zustand
- TypeScript

CMZ App (Enterprise Portal)

A scaled administrative core supporting thousands of active endpoints, hardened through structured Redis cache rings and strict role-based (JWT) authorization layers for low-latency, high-availability operation.

- 25% Latency Reduction
- 99.9% Uptime
- 35% Error Elimination
- Redis
- WebSockets

Hospital-API

A high-throughput clinical workflow orchestration platform. Optimizes lookup routines through heavily cached queries and defensive server request-validation pipelines.

- 40% Workload Reduction
- 30% Query Optimization
- 25% Response Accel
- Node.js
- MongoDB

Cross-Platform TV Suite

Embedded native smart-television systems engineered with modular vanilla abstractions for pristine execution across limited, multi-resolution, low-spec client platforms.

- 30% Retention Boost
- 15% Performance Tuning
- React
- Vanilla JS

SANKALP

Structural system architectural optimization and deep defensive codebase translation for an enterprise core. Implemented system type-safety definitions and refactored core data channels.

- System Architecture
- Deep Code Refactoring
- TypeScript
