

# Yaseen Khatib

## Senior Full-Stack AI Engineer · Builds & Ships AI Products

Senior Full-Stack AI Engineer with 4.5+ years building and shipping autonomous AI products — Agentic RAG, LLM orchestration, and OpenAI function-calling agents on scalable MERN foundations. Expert at slashing system latencies, payload sizes, and engineering bottlenecks at AI-speed. Open to remote roles.

HYDERABAD, INDIA · OPEN TO  
REMOTE

## WORK EXPERIENCE

### Senior Software Developer

06/2025 – Present

Sparity

Hyderabad, India (Hybrid)

- **AI Framework Orchestration:** Engineering complex Agentic RAG models and sovereign system integrations inside enterprise MERN architecture.
- **Workflow Compilations:** Overseeing system transition paths to use highly optimized prompt logic and automated logic layers.

### Full Stack Developer

01/2023 – 05/2025

MSA Software

Remote

- Accelerated system dashboard response speeds by **1.5x to 2x** implementing strict structural caching layers and lazy loading protocols.
- Successfully migrated sprawling legacy JavaScript codebases into safe, strictly structured **TypeScript** pipelines.
- Refactored shared context state parameters from Redux into clean **Redux Toolkit slice configurations**.

### Software Developer (SDE 1)

09/2021 – 01/2023

Manorama Infosolutions Pvt Ltd.

Remote

- Engineered custom REST routing layers inside ASP.NET environments, delivering a confirmed **2x boost in wire payload processing throughput**.
- Restructured system communication parameters cleanly into rigorous Model-View-Controller patterns.

## TECHNICAL SKILLS

### AI ENGINEERING

Agentic RAG

OpenAI Function Calling

Local / On-Device RAG

LLM Orchestration

Claude / GPT

### FRONTEND MASTERY

React.js

TypeScript

Next.js App Router

React Native / Expo

Redux Toolkit

### BACKEND & DATA

Node.js / Express

MongoDB

Redis Cache

SQL Server

## EDUCATION

**B.E (Computer Science)** 2021

D. Y. Patil College of Eng.

**Diploma (CS)** 2018

D. Y. Patil Polytechnic

## CERTIFICATIONS

Front End Architecture — Coding Ninjas

React Production Development — Coding Ninjas

AI & FULL STACK PROJECTS

Sable Flagship Product

A local-first AI financial agent (React Native / Expo). Keeps 100% of financial data on-device in SQLite with no cloud backend; an OpenAI function-calling agent tracks peer-to-peer debts and pushes proactive briefings, with every database mutation gated behind a Review & Confirm boundary. Automated bank-SMS ingestion uses the Adapter Pattern and a p-queue to serialize SQLite writes.

- Local-First / On-Device AI
- React Native / Expo
- SQLite
- OpenAI Function Calling
- Local RAG

[Case Study ↗](#) [Code ↗](#)

streamerOS Flagship Deployment

A Rust-powered desktop cockpit for streaming professionals, engineered via modular Claude orchestrations. Handles live system telemetry feeds, multi-platform chat velocity streams, and real-time automated OBS scene synchronization.

- AI-Architected
- Rust / Next.js
- Live Telemetry
- WebSockets
- Claude AI

[Live Demo ↗](#) [Code ↗](#) [Website ↗](#)

Police Agentic RAG System (POSCO Matrix)

An autonomous agentic RAG engine for law-enforcement workflows. Scans massive multi-format legal archives with custom vector embeddings to trace, evaluate, and output secure, court-admissible verdict matrices.

- Agentic AI
- Vector Retrieval
- LLM Orchestration
- Python

IntegrateX Automation Core

A node-routing workflow-automation environment with responsive connectors, processing layers, and directional edge bindings. A custom state Serialization Adapter compresses graph definitions over the wire.

- 94% Payload Compression
- React Flow
- Zustand
- TypeScript

CMZ App (Enterprise Portal)

A scaled administrative core supporting thousands of active endpoints, hardened through structured Redis cache rings and strict role-based (JWT) authorization layers for low-latency, high-availability operation.

- 25% Latency Reduction
- 99.9% Uptime
- 35% Error Elimination
- Redis
- WebSockets

Hospital-API

A high-throughput clinical workflow orchestration platform. Optimizes lookup routines through heavily cached queries and defensive server request-validation pipelines.

- 40% Workload Reduction
- 30% Query Optimization
- 25% Response Accel
- Node.js
- MongoDB

Cross-Platform TV Suite

Embedded native smart-television systems engineered with modular vanilla abstractions for pristine execution across limited, multi-resolution, low-spec client platforms.

- 30% Retention Boost
- 15% Performance Tuning
- React
- Vanilla JS

SANKALP

Structural system architectural optimization and deep defensive codebase translation for an enterprise core. Implemented system type-safety definitions and refactored core data channels.

System Architecture

Deep Code Refactoring

TypeScript
