Yaseen Khatib

Senior Full-Stack Developer · AI Systems

Five years building for the web end to end — React, Node.js, TypeScript, MongoDB — now applied to production AI systems: Agentic RAG, LLM orchestration, MCP, and function-calling agents. Five products designed, built, and shipped solo in the last twelve months. Open to remote, hybrid, or on-site roles.

CORE Agentic RAG · LLM Orchestration · OpenAI Function Calling · React / Next.js · Node.js · TypeScript · React Native

Interview this résumé from inside Claude —

MCP: yaseen-concierge.yaseenyk.workers.dev/mcp

WORK EXPERIENCE

Senior Software Developer
06/2025 – Present

Sparity — *Hyderabad, India (Hybrid)*

- Integrating **LLMs and agentic workflows** into production MERN systems — owning them from architecture and orchestration through deployment.
- Building **Agentic RAG services** with guardrailed, schema-validated outputs and cost-aware model routing.

Full Stack Developer
01/2023 – 05/2025

MSA Software — *Remote*

- Accelerated system dashboard response speeds by **1.5x to 2x** implementing strict structural caching layers and lazy loading protocols.
- Successfully migrated sprawling legacy JavaScript codebases into safe, strictly structured **TypeScript** pipelines.
- Refactored shared context state parameters from Redux into clean **Redux Toolkit slice configurations**.

Software Developer (SDE 1)
09/2021 – 01/2023

Manorama Infosolutions Pvt Ltd. — *Remote*

- Engineered custom REST routing layers inside ASP.NET environments, delivering a confirmed **2x boost in wire payload processing throughput**.
- Restructured system communication parameters cleanly into rigorous Model-View-Controller patterns.

TECHNICAL SKILLS

AI ENGINEERING

Agentic RAG · MCP Servers · Function Calling · Cloudflare Workers AI / Vectorize · Claude / GPT / Gemini

FRONTEND MASTERY

React.js · TypeScript · Next.js App Router · React Native / Expo · Redux Toolkit

BACKEND & DATA

Node.js / Express · MongoDB · Redis Cache · SQL Server

EDUCATION

B.E (Computer Science) — 2021

D. Y. Patil College of Eng.

Diploma (CS) — 2018

D. Y. Patil Polytechnic

CERTIFICATIONS

- Front End Architecture — Coding Ninjas
- React Production Development — Coding Ninjas
- Advanced Backend Systems — Coding Ninjas

SELECTED PROJECTS

AI & FULL STACK PROJECTS

FitRank — Typed AI Decisions for Staffing

Flagship Product

Ranks people for tasks with typed AI decisions: code applies hard rules, a 23M MiniLM model I distilled scores five bounded questions with probabilities, and a manager makes every final call.

Knowledge Distillation | MiniLM / PyTorch | Tested vs Rules Baseline | FastAPI | pgvector

Case Study ↗

Portfolio Concierge — RAG + MCP Server

Live AI Infrastructure

One zero-dependency Cloudflare Worker, two interfaces: a grounded RAG API answering questions about my work from a Vectorize index of my 100-article corpus (hard refusal below a similarity threshold — no hallucinated answers), and a public MCP server any recruiter can add to Claude to interrogate this résumé from inside their own AI. Corpus re-embeds automatically after every site deploy.

Cloudflare Workers | Vectorize | Workers AI | MCP | Grounded RAG | TypeScript

Path Saathi LMS

Client · 1-Day Delivery

A free vocational-skilling LMS built for a client with existing video/PDF course content. Brief and MVP sketch arrived on a Monday; a working platform — auth, course delivery, self-paced flow — was live on the dev environment the next day. Next.js, React, Tailwind.

Next.js | React | Tailwind | TypeScript | Client Delivery

Live (dev) ↗

Sable

Flagship Product

A local-first AI financial agent (React Native / Expo). Keeps 100% of financial data on-device in SQLite with no cloud backend; an OpenAI function-calling agent tracks peer-to-peer debts and pushes proactive briefings, with every database mutation gated behind a Review & Confirm boundary. Automated bank-SMS ingestion uses the Adapter Pattern and a p-queue to serialize SQLite writes.

Local-First / On-Device AI | React Native / Expo | SQLite | OpenAI Function Calling | Local RAG

Case Study ↗ Code ↗

streamerOS

Flagship Deployment

A Rust-powered desktop cockpit for streaming professionals, engineered via modular Claude orchestrations. Handles live system telemetry feeds, multi-platform chat velocity streams, and real-time automated OBS scene synchronization.

AI-Architected | Rust / Next.js | Live Telemetry | WebSockets | Claude AI

Live Demo ↗ Code ↗ Website ↗

Autonomous Content Machine

Two cooperating pipelines on GitHub Actions, running unattended for $0: an AI writer that drafts a technical article with a branded cover three times a week, commits it, and deploys the static site — and a LinkedIn agent that turns each post into scheduled, UTM-tracked social content with its state ledger committed to Git.

Autonomous Pipelines | GitHub Actions | Python | Next.js | Zero-Cost Infra
